Q. What is ADO.Net?

Q. What are the data provider?

Q. What is the ADO.Net Components? And What is that?

Q. What are the comman class in all data provider?

Q. What are the work for Preforming CRUD Operation with DataBase fro .Net Applications?

Q. What is the use of SQLConnection class?

Q. How to create object of SQLConnection Class of ADO.Net?

Q. What is connection string?

Q. What is .Open() and .Close()? And why we need to close?

Q. What is state property?

Q. Give me example to establish connection with SQL Server?

Q. When we use Using block?

Q. What are the two use of Using Keyword?

Q. Constructors of SQLConnection class of ADO.Net?

Q. Usually where we store the connection string?

Q. How to get the Connection String Value?

Q. What are the namespace/provider used for connection class & how to use class with this provider?

Q. What is SqlCommand and why we Use?

Q. What is the SqlCommand Signature?

Q. What are the step follow by ADO.Net for manuplating Database?

Q. How many Overloaded constructors method in SqlCommand class & Explain it?

Q. What are the most commanly method of SqlCommand class?

Q. What are the ExecuteReader() method, SqlDataReader, and Read()?

Q. What are the ExecuteNonQuery() method and AddWithValue() in ADO.NET?

Q. What are the ExecuteScalar() method in ADO.NET? Provide an example where a user find Max Age values into a database.

Q. What is SQLDataReader class?

Q. GIve me the Exampp=le of SqlDataReader?

Q. What are the properties of SqlDataReader class?

Q. What are the method of SqlDataReader class?

Q. What are the two articture when we accessing the data in ADO.Net?

Q. What is SqlDataAdaptor class?

Q. What is DataSet and DataTable?

Q. What we pass in SqlDataAdapter constructor?

Q. Give me the example, using DataSet?

Q. Give me the example using DataTable?

Q. What if Fill method?

Q. What is the signature of SqlDataAdaptor?

Q. How to call Store procedure using SqlDataAdapter?

Q. How to call Stored Procedure by geting input parameters?

Q. What is DataTable?

Q. Give me 2 exampele add data in DataTable using Database and Without using Database?

Q. What is Copy() and Clone() method use with DataTable?

Q. What is DataSet?

Q. How to get two table using DataSet with Store procuder?

Q. What happen when we try to access the table like that `foreach (DataRow r in ds.Tables["Student"].Rows)`

Q. How to work DataSet and DataTable together, without store procedure use seperate seperate query?

Q. How to preform CRUD operation from database using ADO.Net in MVC?

Q. How to get connection string from Visual Studio?
